EDUCATION

BML Munjal University <i>B.Tech in Computer Science & Engineering; CGPA: 8.48/10.0</i>	Gurugram, Haryana, India Aug 2024 – May 2028
Central Public Sr. Sec. School (CBSE) <i>Class XII (PCM): 70%</i>	Udaipur, Rajasthan, India 2024
St. Paul's Senior Secondary School (CBSE) <i>Class X: 89%</i>	Udaipur, Rajasthan, India 2022

TECHNICAL SKILLS

Languages: Python, Java, C, JavaScript, SQL
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks
Web & Backend: Django REST Framework, FastAPI, Node.js, Express.js, React.js, REST APIs
Machine Learning & Data: Supervised & Unsupervised Learning, Model Evaluation, NumPy, Pandas, EDA
Deep Learning & NLP: Neural Networks, RNNs, LSTMs, Transformers, TF-IDF, Embeddings
Generative AI: LangChain, LangGraph, RAG, AI Agents, Vector Databases
Cloud & Databases: AWS (EC2, S3), Git, GitHub, PostgreSQL, MySQL, MongoDB, SQLite

EXPERIENCE

AI/ML Intern <i>Kansoft Solutions</i>	May 2026 – Jul 2026
- Automated a 6–8 hour/week manual AWS cost-reporting workflow end-to-end, delivering AI-generated cost reports with actionable cloud optimization recommendations. - Engineered data science and NLP workflows in Python (Pandas, NumPy) to clean, transform, and analyze datasets into analysis-ready dataframes and actionable insights.	

PROJECTS

AI-FinOps: AWS Cost Intelligence Platform <i>React, Node.js, Express.js, Neon, Google Gemini</i> 	2026
- Built a full-stack FinOps platform end-to-end during the Kansoft internship, integrating Google Gemini to convert raw AWS cloud-cost data into natural-language summaries and prioritized cost-optimization recommendations. - Implemented automated weekly reporting with node-cron scheduling and pdf-lib for branded PDF generation, replacing a fully manual reporting process.	
ATS-Ranker: AI-Powered Resume Screening Tool <i>Python, Django REST Framework, NLP, SQLite</i> 	2026
- Engineered an ML-powered resume-ranking platform with REST APIs for PDF upload, job-description parsing, and automated candidate-scoring workflows. - Implemented NLP-based similarity scoring (text preprocessing, TF-IDF vectorization, cosine-similarity matching) to rank resume-job relevance with real-time score feedback.	
Personal Developer Portfolio: inflict.in <i>React 19, Vite, Tailwind CSS, WebGL, REST APIs</i>  	2026
- Designed and deployed a portfolio on a custom domain featuring a real-time WebGL shader background, live GitHub-contributions and LeetCode-stats via REST APIs, and a validated EmailJS contact form. - Implemented technical SEO (JSON-LD structured data, Open Graph, XML sitemap) and GA4 event analytics, achieving a 100 Lighthouse SEO score and first-page Google rankings for target queries.	
SneakPeak: Full-Stack Sneaker Marketplace <i>Node.js, Express.js, MongoDB, EJS</i> 	2025
- Built a scalable price-comparison marketplace enabling users to compare products across multiple vendors, with secure authentication, session persistence, and cart CRUD workflows. - Selected as an official study resource for the university's 2025–26 Innovation & Entrepreneurship compendium.	

ACHIEVEMENTS & ACTIVITIES

Competitive Programming: Solved **300+** DSA problems on LeetCode with regular contest participation and a consistent daily solving streak, including a public **45-Day Striver SDE Sheet** challenge with solutions pushed to GitHub.
3rd Place, TechStorm Hackathon: Led a team to build *Ashrafi*, owning ideation & the final demo.
